

Slatz engraver insert panel with media

Single panel door signs

Directories

Wayfinding / directional signs

Directories with IN / OUT slider component

Braille and tactile signs

Slatz Engraver Insert Panels

The Slatz Directory system is a design classic – simple, yet so versatile with the Engraver Insert Panel range.

Slide virtually any 1.6mm material – aluminium, acrylic, composites, etc. – into the front face of a panel.

What's more, the material may be engraved or applied with vinyl text or printed vinyl to display texts and images. Slatz Engraver Insert Panels can also be used with acrylic-covered paper.

Slatz Engraver Insert panels are:

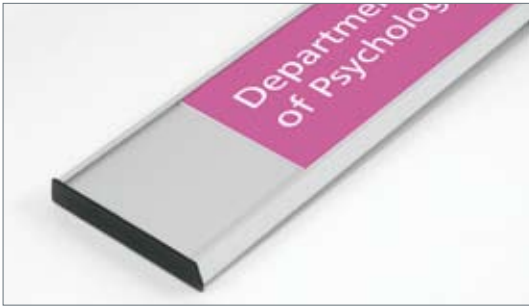

- available in standard mill and silver anodised finishes
- available in 3275mm lengths that can be cut to exact requirements, minimising waste
- quick and easy to use where information is changed regularly
- ideal for Braille and tactile signs, conforming to DDA/ADA requirements
- versatile – they can be incorporated into Slatz directories or be used with corresponding flat-edged end caps to match

**Slatz is the preferred choice
of architects, designers and signmakers worldwide**
